

AU Property Insights

Power BI Dashboard — Screenshot Documentation

Task 8 — BI Advanced

File: AUPROPERTY_PowerBI_Dashboard.pbix

Prepared by: Srikanth

Introduction

This document provides a comprehensive visual walkthrough of the AU Property Insights Power BI dashboard, built on the AUPROPERTYDW star schema data warehouse. It covers the data model, every report page, and the special interactive features implemented (drill-through navigation and button-based page navigation).

1. Data Model View

Switch to Model view in Power BI Desktop and capture the full diagram layout, showing all 10 tables (5 dimensions, 5 facts) and the 9 relationships converging on DimSuburb.

Full diagram layout — all 10 tables and 9 relationship lines visible, DimSuburb at the centre.

2. Home Page

The landing page, featuring the report title and six navigation buttons (Summary, House Value, Rental Value, Schools, Transport, Crime), each with a custom icon.

3. Summary Page

Consolidates all five analysis areas into one landing overview: a KPI card and a state-level chart for House Value, Rental Value, Schools, Transport, and Crime.

3.1 Drill-Through Feature

The Summary page supports drill-through: right-clicking a data point on any of its charts lets a viewer jump directly into the matching detail page, pre-filtered to that context.

Home House Value Rental Value Schools Transport Crime Summary +

Right-click on a bar chart "Avg Rental Amount by State" showing the Drillthrough submenu listing all five detail pages.

Home House Value Rental Value Schools Transport Crime Summary +

The destination detail page after drilling through, showing it filtered to the selected context and the auto-added back button.

4. House Value Page

Analyzes house values by suburb, city, and state: average/median value and listing count KPIs, a geographic map, a top-city comparison, and a price-band distribution.

Full page view: KPI cards, map, "Avg House Value by City" bar chart, and the HouseValue Bucket column chart.

Close-up of the HouseValue Bucket column chart, showing listings grouped into price bands in correct ascending order.

5. Rental Value Page

Analyzes weekly rental amounts by suburb, city, and state, plus a breakdown by rental house type.

Full page view: KPI cards, map, "Avg Rental Amount by City" bar chart, and the RentalValue Bucket chart.

Close-up of the RentalValue Bucket chart, showing listings grouped into weekly-rent bands in correct ascending order.

6. Schools Page

Analyzes school presence and type by suburb and city.

Full page view: KPI cards, map, "School Count by City" bar chart, SchoolType donut chart, and the detail table.

Close-up of the School Count by SchoolType donut chart with its legend visible.

7. Transport Page

Analyzes public transport stop coverage by suburb, city, and state.

8. Crime Page

Analyzes recorded crime incidents by suburb, city, state, and offence category.

Full page view: KPI cards, map, "Total Recorded Incidents by City" chart, "by OffenceCategory" chart, and the detail table.

Close-up of the Total Recorded Incidents by OffenceCategory bar chart, showing which offence types dominate.

9. Additional Features

9.1 Report-Level Filtering

A report-level filter (applied under "Filters on all pages") excludes three suburbs with known data-quality issues (UNKNOWN, WALL FLAT, RETREAT) from every page and every visual automatically.

9.2 Custom Theme and Icons

A custom navy theme (matching colour scheme across every page) and custom flat-icon set (one per KPI metric) were applied throughout the report for visual consistency.

View ribbon → Themes, showing the custom "AUPROPERTY Theme" selected as the current theme.
