

Power BI to SSRS Integration

Screenshot Documentation

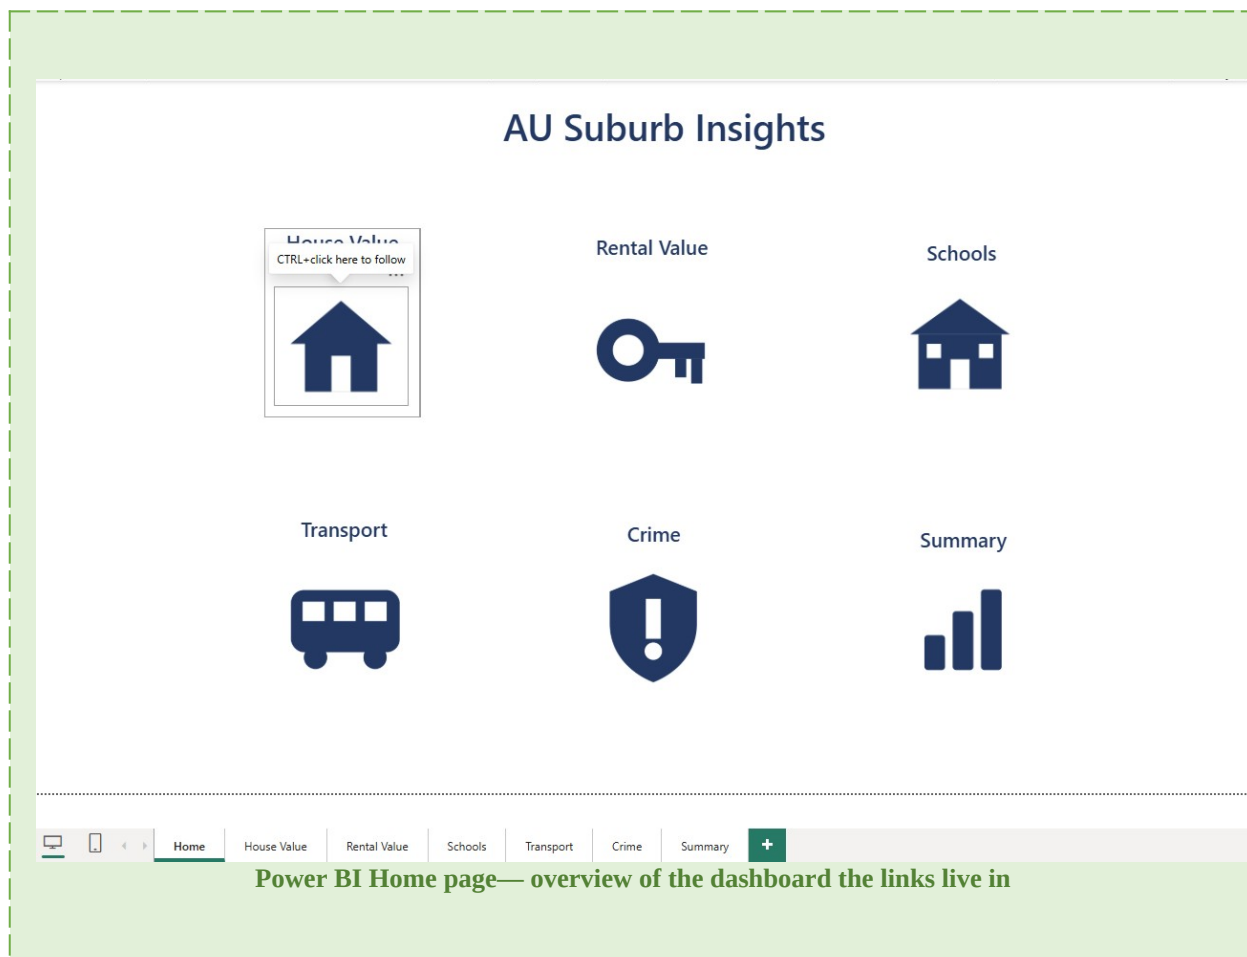

Task 9 — BI Advanced Sprint Part 5

AUProperty Data Warehouse Project

1. How the Integration Works (User Perspective)

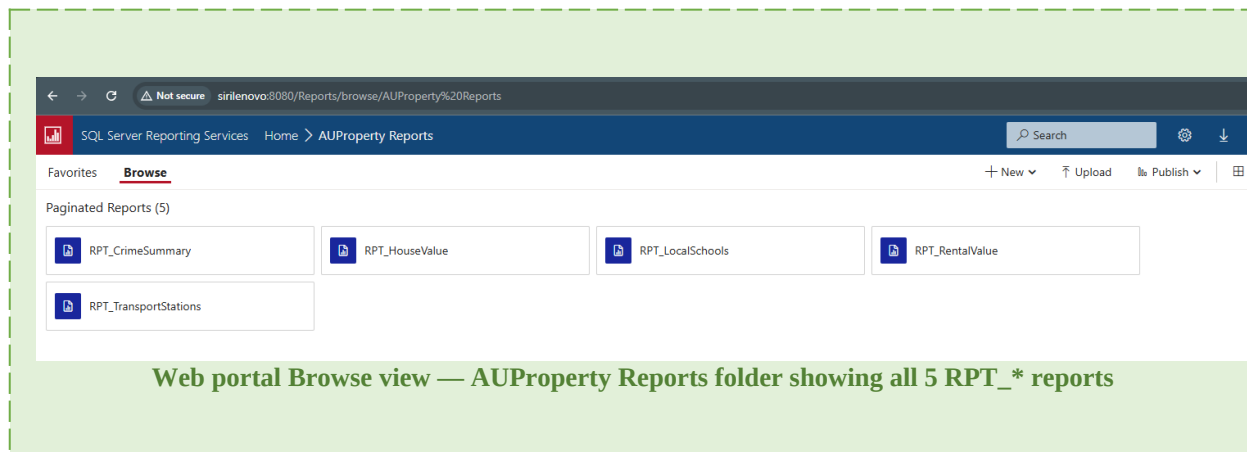

Each of the five Power BI dashboard pages offers two ways to reach the matching SSRS paginated report on the web portal (<http://sirilenovo:8080/Reports>):

- A "View Full Report in SSRS" button — opens the report with State, City, and Suburb defaulting to (All), showing the complete dataset.
- A parameter-passing matrix — every suburb row carries its own hyperlink that opens the same report pre-filtered to that exact State, City, and Suburb.

2. SSRS Reports Deployed to the Web Portal

All five paginated reports are deployed to the AUPROPERTY Reports folder on the report server.

3. House Value Page

3.1 Hyperlinks implemented on the page

7.3 Parameter passing via matrix (filtered)

Clicking a suburb's link in the matrix opens RPT_CrimeSummary pre-filtered — the URL carries ? State=...&City=...&Suburb=... and the report's parameter dropdowns arrive already set to those values.

8. Verified Test Cases

Navigation and parameter passing were verified live during the build:

- House Value — Victoria / Armadale / ARMADALE (\$2,000,000 house value returned).
- Rental Value — Victoria / Armadale / ARMADALE (all six house-type rents returned, \$350 to \$1,199).
- Local Schools — Victoria / Armadale / ARMADALE (3 schools returned).
- Transport — Victoria / Armadale / ARMADALE (train stops returned, including Armadale Railway Station).
- Crime Summary — New South Wales / Albury / ALBURY (4,264 total incidents, matching the matrix's Total Recorded Incidents; also validates %20 URL encoding of a multi-word state).
